

6. Detailed Project Report (Expanded)

Objective:

The main objective of this project is to develop an interactive dashboard for analyzing Amazon sales data using Power BI. This dashboard will provide stakeholders with real-time insights into key business metrics, such as revenue, profit, cost, and performance segmented by item type, region, and sales channels. The goal is to enable informed decision-making by presenting complex data in an intuitive and interactive format.

Benefits:

The benefits of this dashboard include:

- **Informed Decision-Making:** Decision-makers can access up-to-date data on revenue, profit, and costs, enabling them to act quickly based on performance metrics.
 - **Increased Efficiency:** By consolidating data into a single dashboard, the need to manually compile reports is eliminated, saving time and effort.
 - **Real-Time Analysis:** Slicers and interactive filters allow users to analyze data in real-time and drill down into specific metrics for detailed insights.
 - **Improved Transparency:** The dashboard provides a clear, transparent view of business performance, which helps stakeholders track progress and identify areas for improvement.
-

Data Insertion in Power BI:

Data is imported from external sources (e.g., SQL databases or Excel files) into Power BI. In this project, clean data is used, ensuring that no preprocessing is required outside of Power BI. The data is then modeled to create relationships between tables (like sales, product categories, regions, etc.).

Clustering and Analysis:

Power BI can be used to perform clustering by grouping data based on certain features. For example, you might cluster regions with similar sales performance or group item types by revenue.

Final Words:

This expanded version covers all the critical sections you need for your internship project documentation. You can now add specific screenshots of your dashboard, apply more specific DAX queries for your dataset, and expand on the analysis part based on your exact data. By doing so, you'll have a detailed, professional report that will impress your supervisors.
